Alt-Scan

AN ACCESSIBILITY COLLABORATION TOOL

Presented by Victor M. Iglesias

Purpose and Overview

Alt-Scan is a specialized accessibility application developed to help educational professionals ensure instructional materials are inclusive and compliant with accessibility standards. Designed with a focus on visual accessibility, Alt-Scan automates the identification of images lacking alternative text (alt text) in common document types. This tool empowers educators to make course content accessible to learners who use screen readers and other assistive technologies.

1 out of 4

U.S. adults live with a disability (CDC, 2023)

7.5 million

students in the U.S. receive special educational services (NCES, 2023)

Key Benefits

Feature	Value
Multi-format support	Works with .pptx, .docx, and .pdf
Auto-Scanning	Saves time and eliminates manual check
Visual Reporting	Enables targeted remediation with image previews
Intuitive UI	Accessible to non-technical users

Impact

Alt-Scan is purpose-built for Instructional Designers, Design Support Teams, and Faculty, offering a powerful solution to a persistent accessibility challenge. By automating the detection of missing alt text, Alt-Scan closes a critical gap in digital accessibility—making inclusive design more achievable across educational environments. It also streamlines collaboration with subject matter experts, enabling teams to quickly identify where alt text is needed and efficiently gather accurate descriptions to ensure compliance and learner equity.
